- I am an undergraduate student studying backend development in both the .NET and PHP tracks. I have completed internships at ITI in the PHP backend development track . I am also studying web pentesting and have completed internships in cybersecurity at Cybertalent and Trend Micro . I enjoy problem solving and have solved many CTF challenges. At university, I have participated in several projects with my colleagues, including a Python project that used APIs and web scraping to exchange currency between countries and a cybersecurity project called Rummage Tool, which searches for any breaches of your emails and phone numbers on the internet and deep web. I am eager to continue learning and am excited to apply for the Microsoft Egypt Development Center summer training program

WORK EXPERIENCE

intern (summer training)

07/2022 to 08/2022

ITI

menofia

- Role: Backend Developer
